Springer-Verlag GmbH Nov 2009, 2009. Buch. Book Condition: Neu. 235x155x12 mm. Neuware - This monograph deals with metastable states in amorphous semiconductors materials which lack long-range periodicity in the atoms positions, which are in thermodynamic nonequilibrium and which, in addition, have several metastable states. These states give rise to various properties and effects namely a wider range of photoinduced changes and high photosensitivity and X-ray sensitivity that are unique among solid-state semiconductors. Historically, amorphous selenium and selenium-based materials have played an important role in physics and technology, and they continue to do so. In these materials there exist inherent intermediate (metastable) states, structural and electronic in origin, which lead to interesting properties and effects different from those of their crystalline counterparts. In this volume, the metastable states and related effects are investigated in depth against the background of a detailed consideration of local atomic and electronic structure, and taking into account a wide range of light-induced effects. Although the first publications on amorphous semiconductors date back to the early 1970s, studies of metastable states in these materials had not been analyzed systematically up to now, which led to erroneous ideas, even among specialists. In the present book, experimental investigations of metastable states are reported in detail for elemental selenium and selenium-based materials. 122 pp. Englisch.
