Crustal Anisotropy and Shear Wave Velocity Structure

By Ritima Das

LAP Lambert Academic Publishing Okt 2013, 2013.

Taschenbuch. Book Condition: Neu. 220x150x6 mm. Neuware -

Although the history of crustal growth can be traced back to at least 3.8Ga, the record is incomplete and several issues regarding its structure, material properties and evolution remain partially resolved. South Indian shield is a conglomerate of several crustal blocks formed due to the geodynamic processes that operated during Archean to Neo-proterozoic age and provide an ideal geological lab to validate models of crustal evolution and accretion. The primary goal of the work is to understand the nature of the crustal fabrics of different geological units of South India and the tectonic processes responsible for such a fabric by studying the shear wave velocity structure and percentage of S-anisotropy in the crust. 100 pp. English.

Reviews

A top quality ebook and the typeface used was interesting to learn. This can be for all who statte that there had not been a well worth reading through. I am just pleased to tell you that this is basically the very best ebook i actually have go through in my individual life and can be he finest book for at any time.

-- **Mr. Carol Bergnaum IV**

This publication will not be straightforward to begin on studying but quite fun to see. It really is basic but shocks in the fifty percent of the ebook. I realized this ebook from my dad and i advised this pdf to learn.
