Date :2010-12-01 version 2. University-based physics (2nd Edition) F1 version by Zhang Sanhui editor. at the upper and lower two. The book includes mechanical. thermal and vibration and fluctuations. Classical particle mechanics articles about the mechanics. the movement of the ideal fluid. rigid body rotation of the basic content and basic knowledge of special relativity. Thermal papers focus on the molecular statistical theory based on the concept note with the temperature. gas pressure and the Maxwell distribution rate. Vibration and vibration fluctuations and volatility chapter describes the basic characteristics. The next volume of content. including electromagnetism. optics. quantum physics basis. Electromagnetism articles about the traditional system of electric field. electric potential. magnetic field. electromagnetic induction and electromagnetic waves of the basic concepts and laws. but also shows the relative electric and magnetic fields. Chapter describes the optical interference of light. diffraction and polarization of the basic law. Chapter describes the physical basis of quantum wave-particle duality. probability waves. quantum uncertainty relations and the basic concepts of energy and the atomic and solid state electronics and distribution in the law. and finally describes the binding energy of the nucleus. radioactive decay and basic knowledge of nuclear reactions. Physics Today anecdote section describes some of the theoretical development and application of modern physics topics at the forefront. The book also write a lot from life. technology and practical aspects of natural phenomena such as examples and exercises.
