(26) The median cannot be readily determined from a simple frequency graph, on which, if the graph is smoothed, the median bisects the area. However, on a smoothed cumulative frequency graph, the median can be quite easily approximated by drawing a horizontal line at a point which bisects the ordinate which represents the total frequency. Then drop a perpendicular line from the point on the graph cut by this horizontal line, to the horizontal axis and read the magnitude indicated at the foot of this perpendicular. In Chart 7, based on Table XVII, we have an illustration of the interpolation method. For the sake of the comparison two curves have been drawn on this chart, but only the less than curve, that is, the curve based on the column in Table XVII giving the frequencies in class or below, is used in the interpolation,...
